PROFILE

I'm a software engineer who builds software that businesses rely on every day. Over the last eight years I've built web systems, mobile apps and WhatsApp chatbots for companies in Tanzania, Uganda and Malawi, and I've led the projects and teams behind them. Today I'm Head of Systems at ChemCheemi Africa, where I look after our IoT platform and AI work, and I also build software for Ecowater International.

EXPERIENCE

2023 – Present

Head of Systems

ChemCheemi Africa

- Responsible for all of the company's systems, from planning and architecture through to delivery and support.
- Built TapCloud, our IoT platform for connecting and monitoring devices remotely.
- Added AI features to our products and internal workflows, and integrated our systems with banks, mobile money and SMS providers.
- Work with management to decide what we build next and make sure it gets delivered.

2023 – Present

Software Engineer

Ecowater International · Dodoma

- Build and maintain the software behind water ordering, deliveries, retail and payments.
- Part of the team that built Ecowater's new cloud system for Uganda and Malawi, including integrations with local banks and mobile money providers.
- Built an Android app for our new stores that sends store data to the cloud.
- Built Mr. Majik (WhatsApp ordering bot), MajikDrive (driver app), ESMS (remote store management) and EFA (cashier system).

2019 – Present

Freelance Web & Software Developer

Self-employed

- Design and build websites and custom systems for businesses and individuals, from first conversation to launch.

Technical Team Member

Gasify Energy

- Connected our meters to our cloud so meter data comes in automatically.

2018 – 2023

MITz Kits & StadiSpace Manager

MITz Group Company · Mwanza

- Managed the company's main projects and the teams working on them, with monthly financial and technical reports to senior management.
- Started student programmes and designed STEM kits for hands-on learning.
